

ABSTRACT OF THE DISCLOSURE

A sheet guiding system guides different sized sheets so as to be fed in a first direction. Sheets stacked on a sheet tray are guided by selectively using a fixed guide, a first movable guide, and a second movable guide. The fixed guide is provided on the sheet tray immovably in a second direction perpendicular to the first direction. The first and second movable guides are provided on the sheet tray and are movable in the second direction. The fixed guide and the first movable guide are used to sandwich and guide the sheets that have a first dimension in the second direction equal to or larger than a predetermined dimension, which is, for example, a width of an A4 size sheet. The first and second movable guides are used to sandwich and guide the sheets that have a second dimension in the second direction smaller than the predetermined dimension.
